

Project phase 2 - ER diagram

Modifications

1. Gender attribute from the travel guide was removed since it was redundant (already inherited from employee superclass).
2. manager id key was removed from employee.
3. Bus transaction I'd is removed as an attribute for package as we have clearly mentioned bus reservations are independent from travel reservation

4. We have created a relationship between package entity and customer entity to uphold the correctness of the foreign key of package entity
5. The type of relationship 4 in Phase 1 is a quaternary relationship, not ternary.
